Academic System Guide

How to use the live AU-ESET 301 website

STUDENT	William A. Green IV
ACADEMIC YEAR	2026-2027 Academic Year
DOCUMENT ID	AU-OAA-ESET301-SYS-2026-03
REVISION	3.0 / v16.3.64
STATUS	Current Governing Document

DISCERE • AEDIFICARE • SERVIRE

Learn. Build. Serve. | Current runtime: v16.3.64 | Core curriculum release: 16.3

CURRENT WEBSITE USE - v16.3.64

This guide describes the current v16.3.64 learner workflow. It supersedes the former v15.8 platform guide. It does not change curriculum content or Cloud Sync protocol.

1. Start Here

Area	Use it for
Classroom / Learn	Required weekly teaching and the authoritative stage sequence.
Study	Review, flashcards, reached Teaching Media, weak-area repair, and Active Recall. Study has its own week selector and resume point.
Calendar	When required work is scheduled. Event status derives from the same completion evidence Classroom uses.
Practice	Lab Center and Assessment Center entry points.
Progress	Completion, local records, Cloud Sync, and supporting progress views.
Mastery	Retained assessment evidence, repair priorities, and standards-facing summaries.
Engineering Library	Professional/deep references, not a hidden list of extra Required work.
Documents	Current governing documents, current technical baselines, and clearly labeled historical records.

2. Resume Learning vs Resume Study

The two paths are intentionally separate. Resume Learning returns to the next incomplete Classroom stage. Resume Study returns to the most recent Study week/view or an unfinished Active Recall session. Reviewing an earlier week in Study does not move Classroom progress backward.

v16.3.63 COMPLETION TRUTH

If a Lab/Application or Weekly Mastery stage is complete through real evidence, Calendar and Resume Learning now recognize that evidence directly. They do not require synthetic completed flags.

3. Focus Prep and Quiet Mode

- Focus Prep appears when entering sustained Classroom, Study, assessment, or lab work.
- Use the checklist to reduce distractions, set the sensory environment, gather required materials, and define a realistic work block.
- Quiet Mode reduces decorative distraction. Neither feature removes course content or changes mastery evidence.
- Direct lesson page navigation is allowed only to already reached/completed sections; the saved resume point remains separate.

4. Classroom Stage Logic

Stage	What completes it
Start Here	Required orientation action.
CETa Lesson	Lesson gate + all required semantic competency evidence for that

Stage	What completes it
	lesson.
Career Lesson	Career lesson gate + required semantic evidence.
Teaching Media	Required first-pass media path and its brief connection/reflection where required.
Guided Practice	Saved practice/evidence for the assigned work.
Lab / Application	Physical or virtual route evidence plus lab assessment $\geq 80\%$ when a lab is assigned.
Weekly Mastery	Weekly assessment at target plus all safety-critical checks.

5. Study

- Choose the Study week from the visible week selector. Only reached weeks plus the current course week are offered.
- Review Material, Concept Flashcards, Watch & Review, Reference, Work Weak Areas, and Active Recall are help/review modes, not parallel Classroom stages.
- An unfinished Active Recall session remains recoverable even if you switch the Study library to another week.
- Media checklist state is shared across Classroom Related Learning, the Teaching Media Required Path, and Study Media, but checklist state does not equal mastery.

6. CETa Study Guide

The specific Associate CET Study Guide copy is bundled with the site. Alfred maps printed pages to the bundled PDF using the verified +9 PDF-page offset. Required, Review, and Reference roles are assigned by the current Study Guide integration. Opening the PDF does not mark anything complete.

Disposition	Current count
Required printed pages	64 across 14 weeks
Study/Review printed pages	133
Reference/Historical printed pages	27
Total printed pages dispositioned	224
Weeks with no new Required reading	17

7. Calendar and Due Status

Calendar status is descriptive. A required event is Complete when its direct event record or the targeted Classroom stages are actually complete. Past work becomes Overdue only when the required evidence is still incomplete. Advance-prep items are labeled separately and do not replace current-week instruction.

8. Assessments and Review Routing

- Use the Assessment Center for required weekly/lab forms and current major assessments.
- Wrong answers should route back to the exact teaching section when that route exists, with a Back to Question path after review.

- CETa readiness is dual-source: one current Alfred 100-question run $\geq 85\%$ plus one separate current independent ETA/CETa practice assessment $\geq 85\%$.
- Repeated/familiar questions are weaker evidence than fresh application. Use independent evidence to check transfer.

9. Cloud Sync and Offline Use

- Alfred is local-first. Cloud Sync protocol 2 synchronizes supported progress records when configured.
- The Student Sync Key is the private credential used to identify the learner record. Do not paste it into public code, query strings, screenshots, or support logs.
- Study Media consumption lives inside week progress records. Parking-lot notes use keyed records. Current runtime repairs do not require a protocol bump.
- The built-in CETa Study Guide is a bundled static asset. Current code does not hard-block future cloud interaction, but this module does not implement PDF transfer.

10. When Something Looks Wrong

1. Check build-info.json / Release Notes for the runtime version.
2. Refresh once so the network-first service worker can update HTML/JS/CSS and activate the new cache.
3. If Calendar disagrees with Classroom, verify the actual lab/assessment evidence before changing progress.
4. If a current document conflicts with a historical report, use the current governing document and the later applicable release note.
5. Do not erase learner records just to solve a display problem unless a specific migration instruction explicitly requires it.
