AU-ESET 301

Academic System Guide

Revision 2.0 - v15 Academic System Consolidation - September 2026

ONE FUNCTION	ONE AUTHORITATIVE PLACE	ONE SOURCE OF TRUTH
--------------	-------------------------	---------------------

This guide replaces the older operating instructions in the Student Course Binder Index. The syllabus, lab manual, resource manual, and certificate remain useful for their subject matter, but this guide controls how the live Alfred platform is used.

1. The Six-System Model

System	Question it answers	Authoritative responsibility
Study	What should I do right now?	Next action, guided session, Focus/Quiet modes, spaced-review queue, and session confidence.
Week	What am I learning this week?	Weekly outcomes, sequence, lab links, assessment link, required resources, and career translation.
Calendar	When is it scheduled?	Dates, times, deadlines, event details, and rescheduling context.
Practice	How do I prove it?	Lab Center for virtual/physical evidence and Assessment Center for quizzes and tests.
Progress	What have I completed?	Calendar completion, outcome checkoffs, notes, career gates, backup/import, and Cloud Sync.
Mastery	What do I actually know?	Standards, competency evidence, retention, readiness, and repair priorities.

Supporting destinations

The Engineering Library is for reference and deeper explanations. Search Everything finds material across Alfred. The Knowledge Base explains concepts quickly. Projects holds portfolio work. Documents holds formal course files. Student Services holds office-hours, lab-safety, and career-transition guidance.

Release Notes and Deployment Notes are site-administration material and live under About. They are not part of the normal academic workflow.

2. Daily Workflow

1. Open **Study**. Accept the recommended scheduled action or select the needed week.
2. Choose Quick, Standard, or Deep Work. Follow Recall, Learn, Apply/Build, and Prove.
3. Complete the required evidence. For a lab, choose one valid route: Virtual or Physical.
4. Rate session confidence. Alfred schedules the concept in the single Study Review Queue.
5. Take the linked quiz or test when the session requires it. Assessment evidence updates Standards and the Competency Dashboard.
6. Mark the scheduled session complete. Progress records completion; it does not independently decide mastery.

3. Completion, Review, and Mastery

Completion means the assigned event or outcome was finished. It is recorded in Progress.

Review means a concept is due for retrieval. Intelligence may identify the priority, but the review is performed in Study.

Mastery is evidence-based. Standards and Analytics use validated quiz/test results, difficulty, repeated retrieval, recency, and lab evidence. The retired manual weekly Green/Yellow/Red mastery tracker is no longer authoritative.

4. Progress and Cloud Sync

Progress is stored locally first. Cloud Sync merges the same academic record across devices when connected. The production server is built in; ordinary setup requires only a Recovery / Sync Key.

Production Cloud Sync server: <https://alfred-university-sync.totallywill13.workers.dev>

Keep the Recovery / Sync Key private and store a copy somewhere safe. Anyone with the key and server address can access that progress record. Cloud records are not end-to-end encrypted, so do not place passwords, medical information, or other sensitive secrets in notes.

Advanced server configuration remains available inside Sync Settings for backend maintenance. Disconnecting a device does not erase its local progress. Reset Progress affects local progress only. Erase Cloud Record is a separate, permanent cloud action.

5. Source-of-Truth Rules

- Course gives the catalog-level overview; Week Modules give weekly detail.
- Study chooses and performs the next action; Calendar controls schedule context.
- Lab Center owns lab procedure and evidence; Project Center owns portfolio projects.
- Progress owns completion; Standards and Analytics own mastery intelligence.
- Study owns the review queue; Analytics prioritizes weaknesses.
- Assigned resources appear with their Week Module or Study session; the Engineering Library is for intentional browsing and depth.

6. Document Status

Current operating authority: this Academic System Guide, Revision 2.0, plus the live website.

Subject-matter references: Syllabus and Student Handbook, Learning Resource Manual, Assignment and Lab Manual, and the Embedded Career Transition Readiness Checklist.

Archived workflow: Student Course Binder Index, Revision 1.x. Any instruction in that document to maintain a weekly gradebook, log hours, or use the old manual mastery/review workflow is superseded by this guide.
